

# Natural Resources

## Town of Dummerston, Vt.

May 2009

- Identified Vernal Pool
  - Vermont Significant Wetland
  - 50-foot contour
  - Deer wintering area
  - Stream
  - River or pond
- Natural Heritage Data:**
- Plant occurrence
  - Invertebrate occurrence
  - Significant Natural Community

**Sources:**

-The rare plant occurrence location is from VT ANR Department of Fish and Wildlife, Nongame and Natural Heritage Program's Rare, Threatened and Endangered Species and Significant Natural Communities database (VGIS data layer ENDANGER). The information is verified to 2007. Locations of occurrence data points have been moved slightly on this map improve readability.

- Deer wintering areas are taken from the VGIS data layer DEERWN. They were delineated by VT ANR, Department of Fish and Wildlife onto topographic maps. Digital data released in April 1997 were used.

- The wetlands shown are those included in the Vermont Significant Wetlands Inventory (VGIS data layer VSWI). These maps show approximate locations of wetlands that are generally 3 acres or larger in size.

- Surface waters are from the Vermont Hydrography Dataset (VGIS data layer SWnnnnnn). The dataset was generated at a scale of 1:5000 and was developed using digital orthophotos, topographic maps, color infra-red aerial photography and other ancillary data sources.

- Contour lines were generated from USGS 1:24000 Digital Elevation Models by VCGI and edited by WRC. They are intended to portray the general relief of the area and should not be used to determine actual elevations.

- Identified vernal pools were mapped by Alexis Mullen and the Dummerston Conservation Commission's Vernal Pool Monitoring Program. Data were last updated in 2007. Not all vernal pools have been mapped.
